

Broadcast Master™

Library Master™

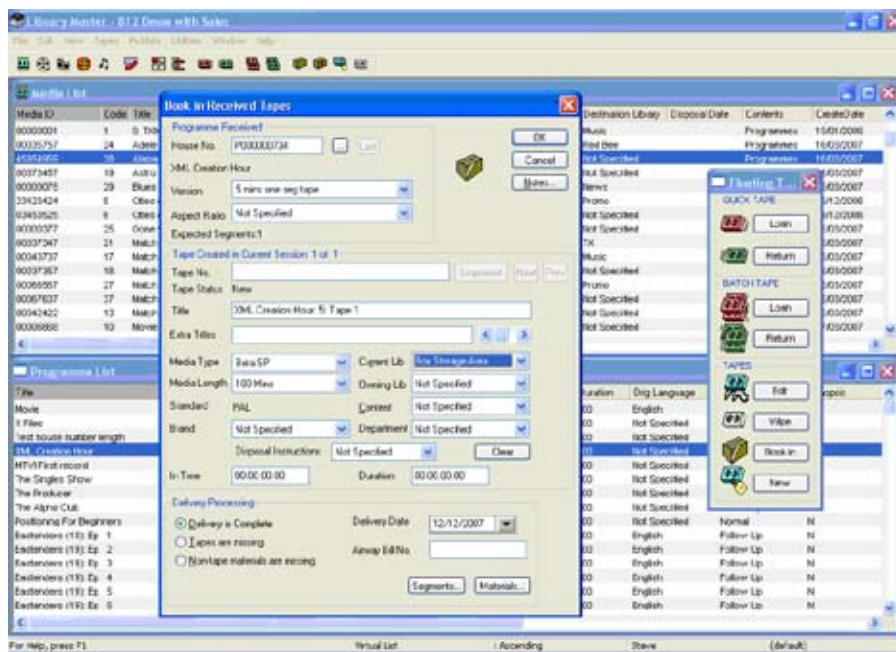

Broadcast Master™ is Harris Corporation's scalable sales and scheduling system designed for growing, independent television and radio operations. Its modular architecture allows users to add components as needs dictate, delivering a cost-effective approach to improving productivity and managing the growth of operations.

Library Master™ is the Broadcast Master module for media library management. The application is designed specifically to ensure optimal usage and operational efficiency of broadcast media libraries. Support is provided for a wide variety of operational functions, including handling new deliveries, loaning and returning media, processing pick-lists and assessing inventory. For tape material, support is provided for library-shelf organisation, the receipt of new

tape material, tape loans and returns, shipping and dispatch, and the creation and processing of tape pick-lists. Full tape histories are maintained.

Library Master interoperates with Harris ADC™ automation or third-party applications to support the maintenance of digital content through the management of ingest, distribution and purging of material on digital storage devices.

A Programme Version screen allows unlimited audio tracks to be associated with versions (also unlimited subtitle files) and details such as end-credit start time and VOEC or DVE moves. This functionality allows rapid planning and deployment of secondary events, combined with the use of template formats.

Library Master helps you manage and optimise the usage of your content library.

FEATURES**Comprehensive Library Tools**

- Loans, returns, wiping and recording deliveries
- Pick-list generation
- Disposal and shipping management

Library Stock Control

- Full media history
- Record of current loans to patrons
- Powerful search facilities

Library Organisation

- Multiple internal and external libraries
- Independent shelf numbering
- Fixed or variable tape storage

Tools to Reduce Workload

- Full barcode and scanner support
- Sony® VTR link for accurate timecodes
- Auto updates of tape details in transmission schedules

Pre-Transmission Process Management

- Ensure delivery of material
- Plan, assign and control tasks, dubs, voice-overs
- Check transmission schedule for work not completed

BENEFITS**Improved Process Control**

- Tight control of location and history of tapes
- System management of all pre-processing tasks
- Earlier preparation of transmission material

Greater Efficiency

- Eliminates disruption due to lost material
- System-controlled planning and control of media-processing tasks
- Sophisticated tools for the librarian

Reduced Costs

- Lower storage costs through dynamic shelf usage
- Minimise last-minute demand for media preparation
- Reduce costs from lost material
