

# Panacea™ Control Panel Options

## Local Control Panels

### Local Control

All Panacea™ routing switchers have the option to include a programmable local control panel. These optional panels can be ordered as a separate line item and installed on the routing switcher prior to shipment. These programmable control panels combine the simplicity of button-per-crosspoint control with user-definable button mapping. All panels have back-lit, positive-touch pushbuttons that can be labeled.

Panacea local control panels are available in a wide range of sizes, and all control panels include the Harris® RouterMAPPER configuration utility, which allows for button mapping and user-specific configuration.
